

**Nursery & Garden Industry
Tasmania**

Building the Resilience and On-Farm Biosecurity

Workshop Series: The process of diagnosing plant health problems

Wednesday - 21st June

10am - 4pm

Event Location:

Tas TAFE

4a Bounty Street, Warrane

A **Pests and Diseases Management Workshop** delivered, in collaboration with NGIA, HIA & DAF, aims at providing information on monitoring for pests and diseases and advanced integrated pest management practices.

Major emphasis will be placed on improving skills in integrated pest management. A number of aspects will be covered in this on-site workshop.

- How to capture images of pests/disease problems cheaply.
- How to diagnose unknown plant health problems.
- Plant health problem solving exercises.
- A site walk of host nursery and how they have changed management actions to improve plant health.
- Resources available to production nurseries through the levy funded project.

The workshop will be delivered by a DAF entomologist and pathologist as part of the co-funded DAF, HIA and levy funded project, *Building the resilience and on-farm biosecurity capacity of the Australian production industry*.

A light lunch and afternoon tea will be provided.

Numbers are limited so please register your interest early.
